1 Ibanity Team Setup.....2
2 Invite colleagues2

1 Ibanity Team Setup

1. Navigate to the developer portal, using the following link:
<https://developer.ibanity.com/>.
2. Create an account, or enter the credentials in order to log in to Ibanity.
3. Use a two step authenticator to verify the account.
4. Choose the action **Create**, next to **TEAMS** in order to create an Ibanity Team.

5. Fill in the company information of the customer and assign a contact person.

2 Invite colleagues

1. Navigate to the Team that has been created in the previous section. Choose the tab **Developers**.
2. Choose the action **Invite** to invite a new developer to the created team.
3. Enter the email address of the developer to add.
4. Choose the corresponding **Role** for the new developer.
 - a. Administrators**
Administrators can fully manage all applications, as well as manage the members of the team.
 - b. Full member**
Full members can manage all applications in the team. They cannot delete applications or manage team members.
 - c. Collaborator**
Collaborators can manage only a specific set of applications. They do not automatically have access to new applications created in the team.
 - d. Reporter**
Reporters have only read access to all details of applications. They cannot create, update or delete applications, nor access credentials of applications.
