Less frustration, more control, Dynavision Trade makes business roll!

This powerful app combines a range of over 50 commonly requested features to streamline your purchasing & sales processes.

Challenges addressed

- In Business Central projects, the same type of customizations are created over and over again. This has a big impact on customer budget.
- Business Central has small sales & purchasing functionality gaps that impact the user friendliness of the application.

Requirements Covered in Business Central Projects

- Set up and manage recurring sales and purchase lines to reduce manual data entry and ensure consistency.
- Optimize combine shipments to create the sales invoices.
- Create back-orders for sales and purchase documents.
- Calculate purchase proposition based on historical sales data.
- Flexible management of Item Attributes (e.g. to enable efficient webshop coupling).

Key features

- **Recurring Sales and Purchase Lines:** Maintain templates for frequently used transaction lines to expedite order processing and maintain consistency.
- **Advanced Combine Shipments:** Get more control on the combine shipment procedure to create sales invoices.
- **Combi Items Functionality:** Create bundled products by combining multiple items, offering attractive packages.
- **Contextual Pop-Up Comments:** Configure informative pop-ups to provide users with critical information during specific actions, reducing errors and improving decision-making.
- **Multiple Payment Recording on Sales Orders:** Record partial or full customer payments directly within sales orders for accurate financial tracking.
