If your units are a mess, we clean up the UoM stress!

Dynavision Advanced Units extends Business Central with powerful UoM capabilities, enabling custom units, dynamic conversions, and invoice/ purchase precision

Challenges addressed

- Manual and error-prone unit conversions
- Inflexible standard units in invoicing and procurement
- Complex scenarios: varying units (e.g. m^2, L, ...)
- No management of minimum quantities or order multiples for sales

Requirements Covered in Business Central Projects

- Multiple invoicing/purchasing UoM per item (e.g. per kg, m^2, L)
- On-the-fly conversions between commercial units and logistic units
- Grouping of units into reusable Unit Classes (e.g. “Wine” class with Bottle 75 cl, Magnum, Box)
- Definition of minimum order quantities and automated surcharges for sales
- Enforcement of order multiples (sell in multiples of e.g. 5) for sales

Key features

- **Unit Classes & Dynamic Conversions:** Define unit groups with conversion relationships using configurable rounding (up, nearest, down) precision
- **Unit Calculator:** Smart on-screen calculator for quick sales/purchase entry, automatically converts invoicing UoM to base UoM in real time
- **Sales Invoice UoM Calculation:** Seamless conversion between custom invoicing units and the item's base unit for accurate invoicing
- **Minimum Order Quantity:** Set thresholds and optional financial penalties for orders falling below the minimum quantity
- **Order Multiples:** Enforce quantity multiples to control packaging or bulk sales constraints
