

Organize with flair; drag and drop without a care!

The Dynavision Drag & Drop app enhances the user experience within Microsoft Dynamics 365 Business Central by allowing seamless attachment management. Now, organizing and retrieving files from your master data and documents is as easy as dragging and dropping.

Challenges addressed

- **Time-consuming file management:** Traditional methods of file management in BC require multiple steps and clicks.
- **Limited external storage integration:** Not all systems easily connect to external storage for easy access to files.
- **Excessive storage consumption:** Storing large files in Business Central can lead to high usage of internal storage space.
- **Manual effort:** The lack of an intuitive way to add, access, and manage documents slows down daily operations.

Requirements Covered in Business Central Projects

- Easily integrates with external storage systems like Microsoft Azure Blob Storage, Azure File System, and SharePoint.
- Leverage external storage to offload files, keeping your Business Central environment lean and efficient.
- One-click retrieval of files from factboxes, reducing the time spent navigating multiple folders or systems.
- Set up categories and document structures for attachments with minimal configuration.

Key features

- **Drag-and-drop functionality:** Effortlessly attach files to master data and documents with a simple drag-and-drop action.
- **External storage support:** Integrates with Microsoft Azure and SharePoint, offering flexibility where documents are stored.
- **Intuitive interface:** Factboxes and a hierarchical file structure make file retrieval fast and easy.
- **Configurable setup:** Customize how your documents are structured and organized within Business Central.
- **Double-click file download:** Download any document with just a double-click.
- **Storage optimization:** Reduce storage consumption within Business Central by offloading attachments to external storage solutions.
- **Easy rollout:** Simple configuration and deployment ensure that businesses can implement the app with minimal effort.
