Layout your way, no dev delay
Dynavision gets it done today!

The Dynavision Layouts app empowers you to effortlessly design custom document layouts in Business Central. No coding required! From invoices to sales orders, ensure your documents reflect your brand identity and are tailored to your specific business needs.

Challenges addressed

- Document Layouts in Business Central have a huge impact on the implementation budget, as a developer needs to invest a lot of time in creating custom layouts.
- When adjustments have to be made to the layouts, the help of a developer is needed.
- Business Central users are not able to easily make adjustments to document layouts.

Requirements Covered in Business Central Projects

- Create & manage layouts in Business Central without the need of a developer.
- Functional parameterization of documents in Business Central.
- Show any data from within Business Central on document layouts.

Key features

- No coding required: Easily create and edit layouts with intuitive controls.
- Document parameterization: edit header fields, edit columns, position addresses, choose report colors, pricing setup, ...
- Configure report lines and determine the fields, order of the fields and format.
- Easily add/delete fields on your documents and take full control over the content.
- Manage commonly used terms across multiple documents through text constants.
- Manage report versions & translations.
- Add labels that are used throughout BC with the attribute printing set.
- Create different versions of your documents.
- ...
