Keep your rental for events lean with full control behind the screen.

Dynavision Rental & Consumption streamlines the full cycle of renting items and handling associated consumables: from availability tracking and pick-up lists to deposits and consumption billing. All steps are integrated directly within Business Central.

Challenges addressed

- Manual reservation or tracking of rental inventory and consumables
- Invisible availability of items over time or across rental periods
- Billing ambiguity for used vs unused consumables
- Labor-intensive return logistics and event-based invoicing

Requirements Covered in Business Central Projects

- Automate event creation from sales quotes, including rental and consumption lines
- Availability overview showing in-stock vs rented items
- Separate tracking and return of consumables, calculation of consumption vs returns
- Automated deposit posting and refunds with configurable journals and G/L accounts
- Automatic generation of pick-up lists for items to be returned
- Invoicing rules including standard or advanced UoM invoicing plus comment lines grouping rental, consumable, and packaging lines

Key features

- **Event-Based Rental Setup:** Create rental “events” with linked workflow from quote to delivery, consumption, return, and invoicing
- **Availability Overview:** Availability overview of rental items
- **Consumption Billing Logic:** Automatically distinguish used vs unused consumables and include deposit reconciliations
- **Deposit Posting & Refunds:** Seamless posting of deposits and refunds via defined journals, with clear audit trails and customer ledger integration
- **Event-Level Invoicing:** Configurable UoM-based invoicing (standard or advanced), comment-grouped lines, and deposit linking at invoice generation
